

Smart Drive for efficient driving styles

✓ Lower costs

Smart Drive will tell you how to lower vehicle consumption. Handling vehicles mindfully, saves both on energy and fuel costs.

✓ Connect all technologies

Compare driver styles and the result of handling different technologies (electric, diesel or CNG) by the same driver. View all data in one overview.

✓ Improve safety

Passenger comfort and safety will increase as driver styles can be evaluated and improved on when necessary.

What is Smart Drive?

Smart Drive tells you how drivers are handling their vehicles and shows you in what aspects they can still improve, leading to a higher efficiency of your fleet. Based on key parameters, well-informed decisions can be made on what aspects to train your drivers. Lowering costs while improving on passenger comfort and safety is what Smart Drive is about. Available for electric, CNG, hybrid, hydrogen and diesel vehicles.

Smart Drive for non-electric vehicles

Smart Drive for diesel, hybrid and CNG vehicles allows a fuel cost reduction of 5%. You will receive the following with Smart Drive for non-electric vehicles:

- + Vehicle usage analysis
- + Fuel consumption & idle time
- + Summary reports
- + Actionable insights
