

✓ One platform

Get a real-time data overview of both your electric and your non-electric vehicles, all in one online platform.

✓ Lower emissions

Lower your carbon emissions by evaluating your vehicles and drivers and improving their performance.

✓ Maintenance

Get a real-time and historical overview of all the active warnings and alerts of your vehicles, and have messages sent directly to maintenance.

Mixed fleets

ViriCiti aims to reduce global emissions and increase the overall efficiency of your fleet by providing you with real-time data. We allow you to manage different vehicle types and infrastructures from different OEMs, all within the same platform so your entire operation is visible on one screen. Insights in energy management, maintenance, and driver performance help you to lower the total costs and increase efficiency of vehicles and drivers. We support electric vehicles, as well as diesels, CNG, hybrid and hydrogen.
